(54) Title: **MOTHER'S MILK PAD**
(57) Abstract

A mother's milk pad
which is free from a stiff
feel otherwise caused by
thermal deformation and
heat-treatment-resisting
materials, and which has
its body formed by
bonding together in

layers a liquid absorbing element (12), a waterproof material (11) disposed on the outer side of the absorbing element, and a surface material (13) disposed on the side opposite to the waterproof material of the absorbing element, wherein stretchable members (17, 17) are respectively disposed at the opposite side edges of the body, and the side edges (13a) of the surface material disposed in contact with the user's skin are turned back toward the side opposite to the user's skin so as to envelop the side edges of the absorbengelement.
